Description

Meter Reading and Billing System Work Flow
 MRBS uploads data from the Billing and Collection System (BCS), schedules accounts per meter reader per day and loads them into a handheld device. The handheld is attached to a portable thermal printer via Bluetooth where actual statement of accounts will be printed.

MRBS streamlines the billing operation in many ways:

- ✓ It eliminates the second trip of bill distribution because bills are computed, printed and handed over to the consumer immediately after meter reading.
- ✓ It generates field finding reports that are provided to customer services with the objective of creating Maintenance Orders documents for Constructions and Maintenance.
- ✓ Eliminates the manual data encoding of consumption at the Billing Section.
- ✓ Eliminates bill printing activities at the Billing Section.
- ✓ Generates the Billing Reports and Summary The system has many tangible and intangible be

The system has many tangible and intangible benefits like:

- ✓ Increase customer satisfaction – consumers get to know their payables days earlier and can check the correctness of their consumption in real time.
- ✓ Reduction of overhead (transportation costs) caused by the usual round of bill distribution.
- ✓ Lesser cost on printing of Statement of Accounts/Billing Notice.
- ✓ Since plenty of man hours are saved, manpower can be utilized in other productive activities.
- ✓ Less overtime means less electricity cost, labor cost, etc.

MRBS runs under a Windows environment and was developed using latest technologies thereby protecting you from near obsolescence.

MRBS is made up of three (3) project components:

1. MRBS Desktop Engine
2. MRBS Handheld Device and Interface
3. MRBS Thermal Printe
